Important notes:

The client has the right to utilize this project report. Irrespective of this, this report is the intellectual property of IFVBESA as the contractor. The contractor is entitled to use this project report for other purposes, provided that this does not violate the client's data protection or confidentiality.

On the other hand, the project report, with the exception of the "authorized abridged version", may not be changed or abridged without the consent of IFVBESA.

The assignment for this project relates to bioenergetically measurable values and their interpretation in accordance with the guidelines of BESA and the IFVBESA.

Maintaining the quality of the tested products and their regular monitoring is the task and responsibility of the client.

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

Investigation of the manufacture, mechanism of action or interpretation of the client's products vis-à-vis third parties is not the responsibility or task of the contractor. Video recordings may only be made with the permission of IFVBESA.

BESA- legend for interpreting the BESA measurement results

The measured value of 50 at the tested meridian represents an optimal energetic state in this organ or its higher levels.

Also measured values in the range of 50 to max. 70 still count as a neutral and balanced energetic status. The organism is able to regulate irritations of the system (wrong environmental signals) very well.

Measured values above 70 to 100 represent the inflammatory range or a so-called energy surplus as a reaction to the irritations of the system by corresponding environmental signals. After reaching the maximum values, the energy state tips into the degenerative (blue) range.

Measured values from below 50 to around 0 represent the so-called degenerative measuring range or a lack of energy as a reaction to the stimulation of the system by corresponding environmental signals.

Measured values represented by a so-called pointer drop of more than 3 scale lines indicate total deregulation.

The influence of certain environmental signals then leads to such strong system overloads, which can only be harmonized by corresponding new signals.

The orange measured values represent a resonance of the tested substances (electronic honeycomb contents) in the respective called bioenergy-informative control circuits as well as in its subordinate or superordinate structures.

BESA key figures:

up 0,79	very deep energetic regulation disorder (SSD) energy deficiency
0,8 to 1,19	strong energetic regulation disorder (SD) degeneration/lack of energy
1,2 to 1,59	energetic regulation disorder (D) degeneration/energy deficiency
1,6 to 1,99	degenerative transition (DÜ)
2,0 to 2,39	optimale regulation (OR)
2,4 to 2,79	in the regulation (R)
2,8 to 3,19	partial inflammation = regional energy excess (PE)
from 3,2	total inflammation = strong general energy surplus (TE)

Basics of the research project P77 2.4

Analysis was commissioned by the company Leela Quantum Tech, LLC to test the effect of the test object, the "Pain Reconciliation Frequency" using bioenergy informative systems analysis (BESA) on the relevant test subjects and to demonstrate its effect on the test subjects.

The test was carried out independently of the subjective perception of all test subjects. The "Leela Quantum Reconciliation Management Frequency Map" was presented as follows, according to the information provided by the contracting company:

Description of the mode of action of the test object "Pain Reconciliation Frequency" by the client:

Description of the mode of action of the test object "Pain Reconciliation Frequency" by the client:

The Leela Quantum Frequency Cards fit comfortably in your pocket or purse. They are charged with powerful, positive frequencies. By working with world-renowned healers, we can exclusively offer you the purest and most effective frequencies for a wide range of needs. Whether you are looking for cleansing, balancing or manifestation, our frequency cards offer unlimited possibilities.

The modern world exposes us to numerous environmental influences that can tire our bodies and minds. We can hardly escape these influences. They are in the air, in the water and in our food. Electrosmog is also omnipresent in our everyday lives. It is therefore all the more important to support the body and mind in maintaining balance and to harmonize and neutralize negative influences, frequencies and radiation. At LeelaQ, it is our goal and concern that you can fully develop your natural strength independently of these influences and build up a positive energy field in order to feel good all round and permanently.

Throughout the day, every minute, you will experience vitalizing quantum energy and supportive, positive frequencies through our products, which strengthen your performance and bring peace to your thoughts.

This is exactly what the "Pain Reconciliation Frequency" does to a high degree.

The technology of the "Pain Reconciliation Frequency" is a tool that generates a concentrated, informative frequency field on the physical, mental and spiritual levels, thereby triggering effective processes on all levels.

This field is therefore able to bring the primal information into balance in terms of energy-information, i.e. to restore the primal vibration (primal frequency - primal characters). According to researchers, these frequencies are among the most innovative developments in the field of natural health. This technology thus combines science and effective frequencies with the aim of delivering life-enhancing energy to the environment required and used by the organism.

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

Direct effect on the energy-informative field

The concept of the "Leela Quantum Reconciliation Management Frequency 'Card" is therefore to open energy channels in order to harmonize or neutralize the dissolution of spasmodic states (pain symptoms) and the associated disturbances or disharmonies in the human energy-informative field and thus to replace negative or blocking and deregulating (spasmodic) states on the physical level with positive states. Due to the way it works, the "Pain Reconciliation Frequency" has a valuable and effective area of application.

Project - Design:

This project is an explorative study in which the harmonizing effect of the test object, the "Pain Reconciliation Frequency", on test subjects is investigated. The design of this project contains modern, quantum-physical elements and creates new standards in the field of research into quantum-technological products and their modes of action.

The explorative research approach of the IFVBESA

New knowledge, new insights and new ideas are the breeding ground on which science and the technologies of the future thrive. The explorative approach of most of our research projects is the seed for the information medicine or quantum technology of tomorrow. In exploratory study design, we present a methodical research approach in which research areas or research questions are investigated that have not yet been investigated. This demonstrates both the development and the potential of novel approaches for research into future technologies.

The concrete and feasible application reference of the international professional association for BESA reduces the otherwise high research risk that often prevents companies and research institutes from dealing with topics at a very early stage of development.

This project is double-blind, randomized and partly quantum-entangled.

Double-blind means that neither the subject nor the tester knows who will be confronted with the test object and who with the placebo. This is only possible through random group allocation (randomization). The aim of blinding is to evaluate the results as objectively as possible.

Quantum entanglement:

Quantum entanglement is a quantum mechanical phenomenon. Two or more entangled particles can no longer be described as individual particles with defined states, but only the overall system as such.

In the current case, this means that the photographs used form an indelible, energy-informative image of the representation in the photograph (i.e. an energy-informative space). In other words, in relation to this project, one can say that the energy information contained in the photographs represents a real extract from the quantum

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

field. The photographs were tested and evaluated in the IFVBESA laboratory using a surrogate BESA.

This means that all subsequent BESA tests of the project, which are recorded by means of photographs, subsequently take place under the IFVBESA laboratory conditions already mentioned above.

What does surrogate mean: This is a substitute person who stands in for the respective test person in the case of a quantum entangled BESA test or application of the test object.

Placebo (empty object)

In this case, unlike the test object, the placebo is an empty object that does not contain any effective frequencies. The test object cannot be distinguished from the empty object (placebo) either for the test subjects or for the test persons.

Proband

Proband in general:

In addition to the test object already described, 24 test subjects form the framework for this research project. Additional test subjects will be integrated in parallel as substitutes for possible unexpected absences.

The test subjects were informed in advance of this project about the general procedures for this project and their function as test subjects.

General means that neither the subjects nor the test persons know what the background of the series of measurements is. The aim of this type of blinding is to obtain as objective an evaluation of the results as possible in order to rule out so-called placebo effects.

The test subjects are anonymously assigned a number from P1 to P24. The test subjects are also assigned anonymously to either the control group or the experimental group.

The different appointments made with the test subjects for the BESA tests can lead to the numbers of the test subjects from P1 to P24 appearing differently in both the experimental group and the control group. For this reason, in the statistical analysis, the numbers of subjects P1 to P24 are additionally numbered from 1 to 24 (list of the experimental group and the control group)

For those test subjects who did not have the opportunity to take part in the BESA tests live during the scheduled time period, photos were taken for the quantum entangled BESA tests. The photos were printed on high-quality photo paper, which is necessary for this form of BESA testing. These test subjects are also included in the statistics with QV (quantum entangled).

The BESA tests are carried out for each test person as follows:

1. at the beginning of the project to establish a so-called status (actual situation).

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

2. in the 2nd part of the project after several minutes of exposure to the test object or the blank object (placebo).

Research support services of the IFVBESA-BESA reference tests

The P77 2.0 research project is specifically concerned with demonstrating the effect of the test object on various stress factors and pain and health-related deregulations of the participating test subjects.

The aim is to check whether the test object can neutralize the possibly negative representations from the VORHER BESA tests or the perception of the stress factors or their possibly perceived disruptive effect on the organism.

The client assumes that by using the test object, the stress factors mentioned by the test persons or the deregulations in the energy-informative system made visible by BESA can be harmonized in an energy-informative and biological way and their vibrations can be transformed into positive, life-promoting vibrations. The test object should therefore be practically and factually suitable for bringing the possibly tested deficiency states of the test subjects back into the physiological norm. This is being tested on the test subjects in this BESA project.

The test object is tested according to the client's requirements within the framework of the applicable IFVBESA conditions for awarding quality seals. Depending on the significance of the test results, seals of approval are awarded in 3 categories, taking into account all tests of a project.

The client and developer of the test object assumes that it is able to compensate for the causes of the stress factors and deregulations in the energy-informative system of the test subjects and to replace the associated negative states with positive states.

The following commissioned BESA tests on the test subjects are intended to determine whether the test object is capable of doing this.

Research project description

Research questions

- 1. does the energy-informative status, as analyzed in the BESA test, change after the test subjects are exposed to the test object live and partly quantum entangled over several minutes?
- 2. is the effect of the test object able to harmonize or improve a possibly deregulated, disadvantageous situation in the energy-informative system of the test subjects?

The purpose of the tests for this detailed research project P77 2.4 is to prove the functionality of the test object by test results that are to be achieved by bringing the test subjects into contact with the test object or blank object/placebo in BEFORE tests (initial value or status) and in AFTER tests.

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

- The BESA BEFORE tests are carried out without using the test object/blank object
- The BESA AFTER tests are carried out during the confrontation of the test subjects with the test object/blank object.

BESA 1 testing BEFORE as status

The person responsible for the test carries out a basic BESA test on each test person. All BESA tests are carried out at the so-called TING points (40 acupuncture nail fold points on the fingers and toes).

The aim is always to create a basic test (status) for each test person as a representation of the overall energy-informative starting situation for all subsequent BESA tests in this detailed project.

Result: The measured values then indicate a corresponding behavior or image of the energy-informative system measured via the meridian end points (acupuncture points) and its subordinate levels such as organs or organ systems.

BESA 2 testing AFTER during the confrontation with the test object or the placebo

In the further course of the BESA test, the test object (or the blank object/placebo - control group) is introduced into the measuring circuit and tested on the test person. The test object or blank object/placebo is thus in direct confrontation with the respective test person. All BESA tests are again carried out at the TING points (40 nail fold points on the fingers and toes) of the test subjects.

The aim for each subject is always to find out how the subject's energy-informative system reacts after confrontation with the test object or empty object/placebo in the measuring circle. What changes can be seen compared to the BESA 1 test BEFORE due to the influence of the test object or the empty object/placebo?

Result: The measurement results show a corresponding change in relation to the test object or the blank object/placebo. This can range from a possible deterioration to a significant improvement in the acupuncture points or the energy-informative state and the underlying levels such as the test person's organs.

The question for the BESA AFTER tests is: "Is the test object suitable and able to represent the perceived stressful effects from the energy-informative field of the test subjects in a regulation or to bring the recognized stresses from the BESA BEFORE tests into a regulative harmonic state via the possible process of quantum entanglement?

The appropriately designed tests should provide information on this by comparing the BEFORE tests without the test object with the test results of the BESA AFTER tests to be carried out using the test object or the empty object/placebo.

General information on the information transfer of the test object

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

Information is transferred from the hyperspace of the test object to the hyperspace of biological objects (humans, animals, plants). From there, the information reaches the reference space or energy space via so-called interaction channels from the background field. This is an amalgamation of all organs and forms of energy in the biological object. The information of the program can be dynamically implemented there and thus change current states. The changes can manifest themselves in the form of neutralization or harmonization of disturbances, the resolution of problems, blockages and disharmonies.

Conditions:

The BESA tests were carried out partly quantum entangled via the corresponding photographs and partly live in the IFVBESA premises under laboratory conditions, at room temperature 20°Celsius, on a natural wooden floor. Before the BESA Basic Status test, the test person is deswitched (made fit for testing) or the test possibilities are questioned.

Test procedure - procedure and specifications for implementation

- the BESA BEFORE tests on at least 24 test persons serve to determine the ACTUAL state

 initial value (no exposure) of the test persons outside the frequency range of the test
 object or empty object/placebo. The results are determined exactly according to the
 specifications of the IFVBESA and documented using the corresponding graphs.
- 2. the BESA AFTER tests are carried out after at least 3 minutes of unconscious exposure to the frequencies of the test object (experimental group) or unconscious exposure to the blank object/placebo (control group). The procedure is as already mentioned in the research project description.

The aim of the development team is to determine whether the test object is suitable for harmonizing the deregulations resulting from toxic stress factors in the bioenergy-informative system of the test subjects, as noted in the product description.

Test procedure

BESA 1 BASIC testing as bioenergy-informative status:

In the first step, a bioenergy-informative basic test (bioenergy-informative status) is carried out at the meridian end points (TING points) of the test person.

BESA 2 Testing of the test object or the blank object/placebo against the test subjects

In this BESA test, all test subjects are confronted with the test object (experimental group) or the blank object/placebo (control group).

Now the question is: How does the energy-informative system of the respective test person react within the effective range of the test object or empty object/placebo?

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

Proband 19 P12-KG-QV BESA 1 Testing—BEFORE

BESA 1 Testing BASIC BEFORE quantum entanglement as status

BESA test evaluation P77 2.4

from **29-05-2024 at 19:30 – 19:34** (4 minutes) Page 14 to 16

result:

In view of the young age, the measured values indicated a strongly degenerative picture of the subject's energy-informative system measured via the meridian end points (acupuncture points).

95 % in the blue area

5 % in the green area

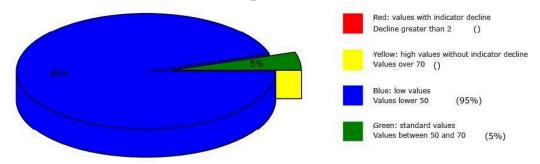

Conclusion:

As the BESA graphs and the pie chart show, 95% of the measurement results were in the blue and degenerative range (energy deficiency!).

This means that the test person is in a deeply deregulated, energy-informative overall situation in relation to his young age. Here we are clearly talking about a heavily burdened energy-informative overall picture.

Proband 21 P14-KG-QV BESA 1 Testing BASIC-BEFORE

BESA 1 Testing BASIC BEFORE quantum entenglement as status

BESA test evaluation P77 2.4

from **31-05-2024 at 21:14 – 21:19** (5 minutes) Page 26 to 28

result:

The measured values indicated an extremely deeply degenerative picture of the energy-informative system measured via the meridian end points (acupuncture points) and its subordinate organs or organ systems.

The measured values on the subject's energy system show a highly stressful overall energy-informative situation. 97 % in the blue range 2 % in the red range.

97 % in the blue area

- 2 % in the red area
- 1 % in the yellow transition area

Conclusion:

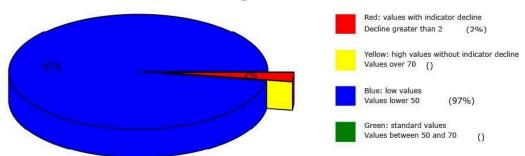

As the BESA graphs and the pie chart show, 100% of the measurement results were in the blue and generally very low degenerative range. In relation to the organs tested, this corresponds to a very high and alarming energy-informative state.

In summary, this means that the subject is in a very deep deregulation, as can also be seen in the following BESA graphs.

Tel.: 0043 - (0)664-73152899 I E- MAIL: info@ifvbesa.at Website: www.ifvbesa.at oder www.besa-guetesiegel.com

BESA 2 Testing AFTER

BESA 2 Testing AFTER, during the quantum entenglement confrontation with the empty object/Placebo

BESA test evaluation P77 2.4

from **31-05-2024 at 01:04 – 01:11** (7 minutes) Page 29 to 31

result:

The measured values again indicated a similar picture with deeply degenerative conditions in the energy-informative system measured via the meridian end points (acupuncture points) and its subordinate organs or organ systems.

100 % in the blue area

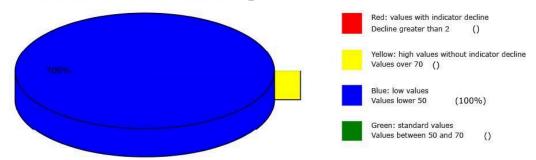

Conclusion:

As the BESA graphs and the pie chart show, all measurement results in this test were also in the blue and still deeply degenerative range. In terms of the organs tested, this corresponds to a continuing severe energy deficiency.

In summary, this means that the test person is still in an energy-informative degeneration after using the blank card/placebo, as can be seen in the following BESA graphs. In other words, the blank object/placebo was unable to achieve any significant improvement in the energy-informative state..

BESA 2 Testing AFTER

BESA 2 Testing AFTER durin in confrontation with the empty object/placebo

BESA test evaluation P77 2.4

from **31-05-2024 at 01:12 – 01:22** (10 minutes) Page 35 to 37

result:

The measured values indicated a similarly balanced picture compared to the values previously seen in the BESA 1 test at the energy-informative system measured via the meridian end points (acupuncture points).

85 % in the blue area

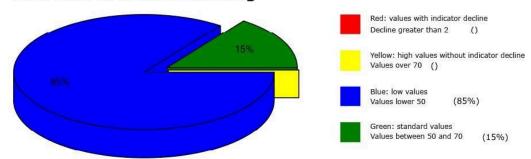

15 % in the green area

Conclusion:

As the BESA graphs and the pie chart show, even after using the empty object/placebo, almost all the measurement results were at a similar level to the BESA 1 test BEFORE.

However, this is also clearly evident here: The blank object/placebo was unable to achieve any significant improvement in the energy-informative state.

BESA 2 Testing AFTER

BESA 2 Testing AFTER during in quantum entenglement confrontation with the empty object/placebo.

BESA Test evaluation P77 2.4

from **31-05-2024** at **22:40 – 22:57** (17 minutes) Page 48 to 50

result:

The measured values indicated a similarly stressful picture at the energy-informative system measured via the meridian end points (acupuncture points).

72 % in the blue area

25 % in the green area

2 % in tghe red area

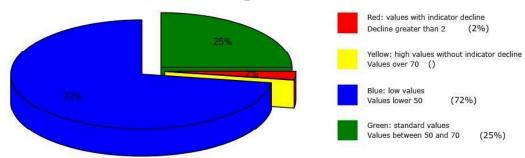

1 % in the yellow transition area

Conclusion:

As the BESA graphs and the pie chart show, even after using the empty object/placebo, the measurement results were similar to those from the BESA 1 VPORHER test, even slightly worse.

Here, too, it is quite clear that the empty object/placebo was unable to achieve any significant improvement in the energy-informative state of the test person compared to the BESA 1 test BEFORE.

BESA basic test

- +++: Indicator decline > 15 Skt. ++: Indicator decline 6-15 Skt.
 - > 15 Skt. T: Total inflammation (>89 Skt.)
 15 Skt. P: Partial inflammation (70-89 Skt.)

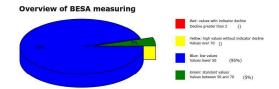

D: Degeneration (< 50 Skt.)

BESA-Testing AFTER with empty object/placebo

General information on the test result

Humans are a kind of receiving antenna for environmental information. This is because human life is fundamentally and exclusively dependent on environmental information. Our organism is biologically very sensitive where natural information (fields) is located or where this natural information is subject to interactions and fluctuations. For this reason, detected informative interference fields are biologically highly relevant. Any reduction or conversion of these interference fields (ideally to 100 percent) is biologically very important, often even vital. These information burdens from our environment are only compatible with life if they can be readjusted to a natural fluctuation tolerance. Disruptions, problems, blockages and disharmonies in the human biological control loop are caused by such disruptive toxic information influences.

No neutralizing or harmonizing effects could be demonstrated in this detailed project P77 2.4 Control group to determine the effect of the blank object/placebo. As a supposed test object, the blank object/placebo was unable to neutralize the biologically adverse effects and effects observed in the test subjects.

Authorized Summary

The BESA tests carried out by IFVBESA in the P77 2.4 detail-project on the energetic and physical effectiveness of the test object (empty object) in the control group clearly showed that it was unable to neutralize or harmonize biologically significant stress factors in relation to the meridians or acupuncture points of the test subjects.

Result:

The test subjects were brought into contact with the blank object/placebo during the BESA AFTER tests. In contrast to the BEFORE tests, in which the blank object/placebo was not used, no significant changes in the measurement results were found that would have indicated that neutralization or harmonization had taken place. No regulatory dynamics could be detected in any of the cases mentioned.
